PROFESSIONAL EXPERIENCE

University of Illinois at Urbana-Champaign 08/2007 - 12/2012
Research Assistant Urbana, IL, USA
- My research has been focused on developing and analyzing new computational tools for robust and efficient discovery of structural regularities in images and videos, and applying them to solve challenging real-world problems such as face recognition, structure from motion, and video stabilization. Results have been published in top-tier conferences and journals in computer vision including TPAMI, TIP, CVPR, ICCV, etc.

Visual Computing Lab, Adobe Systems Inc.   05/2011 - 08/2011
Research Intern   San Jose, CA, USA
- Research on a novel approach to structure and motion recovery directly from one or more large planes in the scene. Built a complete plane-based structure from motion system and shown its advantage over conventional systems in handling two important issues in practice, namely, the plane degeneracy and the dynamic foreground problems.

Visual Computing Group, Microsoft Research Asia   05/2009 - 08/2009
Research Intern   Beijing, China
- Research on the theory and first-order convex optimization algorithms for robust low-rank matrix recovery from grossly corrupted observations. As an application, I developed a new approach to reconstructing accurate camera geometry and 3D models from multiple uncalibrated large-baseline images for urban structures. This new method works in a holistic fashion by using global features based on transform-invariant low-rank textures, instead of relying on traditional local features such as points and edges.

Tsinghua University   02/2006 - 07/2007
Undergraduate Research Assistant   Beijing, China
- Project on mobile phone camera-based name card recognition system.
- Project on 2D barcode recognition system.
- Research on multi-view face recognition.
